FACING THE WORLD’S ‘DOUBLE BURDEN’ OF DISEASE

Tremendous progress has been made towards achieving the health focused MDGs: child mortality has dropped dramatically and targeted investments in fighting malaria, HIV/AIDS and tuberculosis have saved millions of lives. We as an industry have helped the global health community move the needle, but there remains much to be done.

The post-2015 global health agenda must address a double burden of disease. Infectious diseases like HIV/AIDS, tuberculosis, malaria and neglected tropical diseases pose a serious threat to human health and economic development, acutely illustrated by the Ebola Crisis. All the while, the looming rise of chronic diseases will present a serious health and economic burden for national governments to manage, rich and poor alike.

IT IS INDISPUTABLE THAT CROSS-SECTOR COLLABORATION AND PARTNERSHIP WILL PLAY AN ESSENTIAL ROLE IN THE ATTAINMENT OF THE SDGS AS A WHOLE

Targets for the post-2015 development agenda must be ambitious, and will rely heavily on the contribution of people across all sectors - national governments, the United Nations and its agencies and other international organisations, NGOs, the private sector and civil society. It is indisputable that cross-sector collaboration and partnership will play an essential role in the attainment of the SDGs as a whole, and for targets that pursue worldwide health and well-being there is no exception. Partnerships are to be a key strategy moving forward, so much that the model itself has been highlighted as a proposed SDG, SDG 17: Strengthen the means of implementation and revitalise the global partnership for sustainable development

Partnerships in health are not a new phenomenon, and in many ways such programs pioneered the relationship between the public sector and private sector in the context of global development many years ago. The research-based pharmaceutical industry has a long track record in partnerships, there are currently over 250 active programs between IFPMA member companies and their public, private, academic and non-profit partners. We have seen first-hand how partnerships can play an instrumental role in improving the health of entire communities and this is why we fully endorse the commitment of the SDGs to pool together resources and create new constellations of expertise.

INNOVATIVE AND SUSTAINABLE SECTOR-WIDE PARTNERSHIPS

As an association, we have instigated a number of programs to strengthen health systems across low-and middle-income countries and improve the quality of care for patients. In the last two years alone, we have kick-started five partnerships with a regional or global reach, many with a focus on the prevention of chronic diseases, already responsible for 63% of deaths globally and increasing every day.

Last year we teamed up with the International Federation of Red Cross and Red Crescent Societies (IFRC) to develop, pilot and scale-up the implementation of ‘4HealthyHabits’, a tool to help 3 million people in the IFRC’s volunteer network reduce the prevalence of chronic diseases in their community. Behavioral change in four key areas - unhealthy diet, excess alcohol, tobacco use, physical inactivity - dramatically reduces an individual’s risk of developing the four most prevalent chronic diseases: cancer, cardiovascular disease, chronic respiratory disease and diabetes.

Recognizing the huge potential mobile technology has to leap-frog and overcome barriers, in 2012 IFPMA joined forces with the International Telecommunications Union’s (ITU) multi-stakeholder partnership ‘Be He@lthy, Be Mobile’, sharing with national governments best-practices for mobile health (mHealth) strategies and providing important information on disease prevention and management direct to mobile phone users.
CASE STUDIES OF HEALTH PARTNERSHIPS THAT IMPACT EVERY COUNTRY IN THE WORLD

IFPMA also hosts the Developing World Health Partnerships Directory (http://partnerships.ifpma.org/pages/), a continuously expanding online database that allows users to view in depth health partnerships from across the world that involve the research-based pharmaceutical industry. Users can also hear the stories of people working to implement partnerships on the ground and the testimony of people who have had their lives impacted by these initiatives.

The programs are wide-reaching, demonstrated by the GAVI Alliance, which has supported in the vaccination of nearly half a billion children worldwide since 2000. The programs are sustainable, demonstrated by a number of innovative technology transfers that share intellectual property, manufacturing capacity and scientific expertise so that generics manufacturers in emerging markets can develop high-quality medicines for HIV/AIDS and multi-drug resistant tuberculosis. And the programs are creative, demonstrated by the Transnet-Phelophepa Healthcare Trains, each year providing 375,000 people living in rural South Africa access to healthcare, with carriages for ophthalmology, obstetrics, psychological counselling, oncology, dentistry and more, crossing the country on wheels.

Our experience has taught us that partnerships can improve effectiveness by reducing both risks and duplication of investment activities. The 250 active partnerships on the IFPMA Directory go beyond corporate social responsibility or the model of a donor and beneficiary; they seek transformational engagement, addressing systematic issues to have a lasting impact, a demonstration of the pharmaceutical industry’s leadership in putting shared value into action. They are designed around the core competencies and assets of each partner, and leverage existing systems to foster local ownership. For our sector, partnerships are not a new concept. But as society embarks on the ambitious goals of the SDGs to address the world’s most pressing challenges in healthcare and beyond, we will all have to kick things up a couple of gears. As an association, we walk the talk, as do our members. And so, at this critical juncture in the global development agenda we stand ready to cooperate with other sectors, as well as NGOs, universities, governments and international organizations, to grow as a community of partners and catalyze transformational change.

THE UNION OF INTERNATIONAL ASSOCIATIONS (UIA)
The Union of International Associations is a non-profit, independent, apolitical, and non-governmental institution in the service of international associations. Since its foundation in 1907, the UIA is a leading provider of information about international non-profit organisations and a premium networking platform between international organisations and the meeting industry worldwide.
