Figure 0.1. Current overview

Number of international organizations: 2000

These tables suggest different answers to the question "How many international organizations are there?" Each table is a different combination of types of non-profit organization in the *Yearbook of International Organizations*. To be included in the Yearbook an organization must satisfy, or appear to satisfy, some understanding of "international". Totals for each cluster are different reflecting different possible combinations of types.

- 1. Conventional intergovernmental organizations, when attaching importance to the non-recognition of international nongovernmental organizations in terms of international law. (Multilateral treaties, Type T, might be added as closely related international "instruments".)
- 2. Conventional international bodies, both governmental and nongovernmental, when attaching importance to the existence of autonomous international bodies as a social reality.
- 3. Conventional bodies (Types A to \acute{D}) plus special forms (Type F), when recognizing the importance of organizational substitutes and unconventional form. (To the latter might be added conference series, Type S, and multilateral treaties, Type T, as forms of organization substitute.)
- 4. Conventional bodies (Types A to D), special forms (Type F) and religious orders (Type R), when attaching importance to the social reality of the latter as independent actors.
- 5. Conventional bodies (Types A to D), other international bodies (Types E to G), religious orders (Type R), and multilateral treaties (Type T), when recognizing the international impact of semi-autonomous and nationally tied organizations.
