# Figure 10.3.2.
Sample application of NetMap

Database: multiple
Link type: multiple
Network nodes: -----
UIA database: http://db.uia.org/data/netmappeduia/netmap_ppt_000908_files/frame.htm and http://www.netmap.com/

This sequence of images using UIA data on all international organizations, strategies and world problems (some 200,000 profiles) illustrates some uses of the NetMap software tool described in the previous figure. The first image shows all the entities positioned on the circumference of a circle. Successive images thereafter show the results of zooming in on the circumference to a point at which the entity names become apparent -- followed by some images reconfigured to analyze particular patterns of links. More information about this extraordinary visualization tool is available at http://www.netmap.com/ and on the CD-ROM included in this volume.
