

Figure 1.1.1. (c and d) Types of organization
Relative numbers of international organizations by type: 2001

Figure 1.1.1. (c): Pie charts indicating proportions of intergovernmental organizations (IGOs), international nongovernmental organizations (NGOs) and all international organizations organization (All) constituted by different organization types (see Appendix 10 “Types of organization” for further information on types).

Note that these charts are distributed on a different basis to those in the same figure of last year (Ed 38, 2001-2002, Figure 1.1.1 (a)). Last year, a segment of the pie represented the proportion of that type within a larger grouping as specified in Figure 1.1.1 (a). So type “T” (treaty organizations) were last year calculated as around 43% of all IGO “Special types” (H, J, K, N, R, S, T and U); this year they are around 32% of the total IGO pie.

Figure 1.1.1. (d): Bar chart indicating relative numbers of IGOs and NGOs by type (see Appendix 10). Note logarithmic scale.
