

## **Part B. Visualizations and patterns**

This part is a partial response to the needs of many for new ways of thinking about the complexity of international organization networks – and the networks of problems with which they deal, and the networks of strategies advocated in that process.

There is a major challenge to enable people to obtain greater insight into complex networks of relationships amongst international organizations, world problems, strategies in response to them, human development and human values. The challenge is to compensate for the natural tendency to rely on focused information on urgent issues by enabling people to work with contextual information and configurations of related issues and responses to them.

Representations of non-quantitative relationships and patterns between organizations, problems and strategies are provided in the form of network (spring) maps. Online variants in colour of many of these may also be accessed from the web URLs referenced on individual presentations.

For further explanatory information on displaying complexes of problems, strategies, values and organizations, see Appendix 3: Visualization and patterns.

## **Part B. Visualizations and patterns**

### **Section 10. Network analyses**

- 10.1. International Organizations
- 10.2. World Problems and Issues
- 10.3. Global Strategies and Solutions
- 10.4. Human Values
- 10.5. Human Development

---

**Disclaimer:** The spring maps presented on the following pages have been generated from profiles in the UIA databases. These are updated in the light of information received and when priorities permit. Those selected are presented for illustrative purposes only – to a level of detail considered interesting for that purpose. In some case greater weight has been given to the aesthetic properties than to the substantive content or the need for legibility (details can be explored in SVG images online). They may call for enrichment and amendment. They may indeed contain elements that are contested from some perspectives. In some cases links – notably in the case of organizations – should be added or removed in the light of important political changes subsequent to the generation of the maps. The editors regret any misunderstanding if more recent information would otherwise have permitted an improved map to be presented.
