

Caveat

Readers are reminded that the tables in this report are re-created each year, using data which are constantly updated.

Researchers following trends in meetings should bear in mind that data for the current reporting year are provisional: data will change as research continues.

When comparing consecutive years in flux, it should be remembered that both years' totals can be expected to change over time, the latest slightly more rapidly than the older. **The number of meetings in the database for the current reporting year will, on average, increase by 25 percent over the following three years, and by 40 percent over the following five years.**

As noted above, closer links between the meetings database and the organizations database gave an exceptional boost to the numbers presented as of the report for 2008 (published in 2009); these numbers have, in the intervening years, been further corrected and stabilized.

If strictly comparable data are required – for example, the situation for a given city at exactly the same time each year for a number of years – it is advisable to use the UIA's data to compile a time series. The UIA has used the same sources and same editorial practices for many years so, while the database may not be comprehensive, it is reliably consistent in terms of methodology.

Geographical names

It is not the intention of the editors to take a position with regard to the political or diplomatic implications of geographical names or continental groupings used. The country, city, and continental names used in this publication are chosen for the sake of brevity and common usage. Within the limits of standardization required for statistical purposes, the geographical names used by the organizer of the meeting are respected. This may sometimes lead to territories and dependencies being listed separately, which then affects the totals per country.

Methodology

The data in this report are drawn from the *International Congress Calendar*, the meetings database of the UIA. The method of data collection and selection used for this edition is consistent with that of the past 30 years.

Since 1910 the UIA has collected information on international organizations and their international meetings; a first statistical review was published in its *Revue internationale des congrès* in 1910. Since 1960 the UIA has prepared statistics on the international meetings that have taken place worldwide in the preceding year. This work is based on routine research and surveys undertaken by the UIA for the compilation of the *Yearbook of International Organizations* (published since 1950) and the *International Congress Calendar* (published since 1960).

The prime source of information is international organizations. The UIA's researchers work continuously throughout the year on the meetings database, adding and modifying event records using information acquired from international organizations by mail and e-mail and from other sources such as periodicals and the internet.

Data are extracted and compiled from the database at the end of April each year in order to report statistics on the year just passed. So this edition published in 2013 is of data collected in 2012.

While never claiming to be a complete survey of all international meetings, the merit of the UIA statistics is that they have been compiled over several decades from the same sources and using consistent methods and criteria.

Because the UIA's meetings database is always changing, data extracted from the database today differ from those extracted and published previously, whether they refer to the future or to the past. Changes may arise from the re-scheduling or relocation of meetings and from the addition of supplementary information on recorded meetings or the addition of previously unrecorded meetings. As data are modified, more meetings are added to the database than are removed.

Continuity

Since 2003 all data are extracted anew each year from the UIA meetings database. The present format, while differing from that of previous years, is consistent in presentation with that of the past 30 years.

The editors note that there have been initiatives in recent years to determine a standard and generally accepted and applied definition of the term "meeting". While the editors see the need for such an agreement, they point out that the chief merit of the UIA statistics is that they have been compiled over several decades from the same sources and using consistent methods and criteria.

Other resources

Custom research reports based on these data and further data from the *Yearbook of International Organizations* are available from the UIA Secretariat. Contact us for more information.

Readers wishing to study the overall association meetings market should also make use of the statistics reports produced by ICCA - International Congress and Convention Association. It too provides only a partial picture because of its criteria for inclusion (see below), but it should be seen as a complementary resource to be used alongside UIA statistics to create a more complete understanding, rather than an alternative or competing view, of the same market segment.

The ICCA Association Database includes only events which occur regularly, which rotate between at least three countries, which are organized by associations, and which attract at least 50 participants. It does not attempt to include all association events, many of which are one-off or tied to a single destination, nor inter-governmental meetings, nor the corporate meetings market. ICCA collects the information from its members, from international associations themselves, and by conducting planned research to fill in the gaps.

What is an “international organization”?

The *Yearbook of International Organizations*, which profiles the organizations whose meetings are a focus of these statistics, catalogues all “non-profit” “international” “organizations” according to a broad range of criteria. It therefore includes many bodies that may be perceived, according to narrower definitions, as not being fully international, or as not being organizations as such, or as not being of sufficient significance to merit inclusion. Such bodies are nevertheless included so as to enable users to make their own evaluation in the light of their own criteria.

The editors of the Yearbook are sensitive to the existence of forms of social organization that may substitute for the creation of a more formal or conventional organizations. A conference series with no continuing committee is one example.

The definition of “profit-making”, and the extent to which any “non-profit organization” may incidentally or deliberately make a profit as defined by particular tax regimes, cannot be unambiguously resolved. This grey area has been treated in a variety of ways with the sensitivity it merits. The editors are attentive to the non-profit objectives of an organization registered under for-profit legal status. Especially problematic are the professional and trade organizations whose existence is in part justified, in their members’ eyes, by the extent to which they defend or improve the members’ income. That said, bodies that are unambiguously constituted as “for profit” are excluded from the Yearbook.

The editors acknowledge that some types of international organization may be totally absent or under-reported in the Yearbook, such as virtual organizations associated with the internet (including those of otherwise conventional structure, and also “usenets”, web discussion groups, “listserv” communities, etc), criminal networks, cartels and price-fixing rings, mercenary groups, spy and undercover organizations, terrorist organizations, secret societies, religious sects, family and fraternity groups, bodies with no formal structure or fixed address, or associations essentially constituted by a journal subscribership.

The editors have always given priority to bodies that are not focused on, or deriving from, a particular country. This may be construed as under-reporting of certain forms of aid, missionary activity, language and cultural activities, and so on.

The editors have traditionally stressed the importance of involvement of three countries on a more-or-less equal footing, to the exclusion of bi-lateral international bodies and those in which a particular country is dominant. Indications of “internationality” include distribution of board members, location of meetings, rotation of secretariat, source of finance, and membership.

The number and variety of organizations in the Yearbook are sufficient indication of the problems of information collection. Documenting many organizations and their meetings is challenging for reasons such as the following:

- Information on an organization’s activities may take time to filter through communication networks and be registered by the editors.
- Many organizations are ephemeral creations or are only “activated” for infrequent meetings, events or projects.
- Many bodies are reluctant to publicize their activities.
- Organizations may not respond to questionnaires, or may omit significant information from their replies.
- Many active “international” bodies do not perceive themselves as “international” or as sufficiently formalized to be mentioned in the same context as those that are legally established.
- Regional proliferation and functional specialization is such that, frequently, organizational “neighbours” do not know of each other’s existence.
- A significant number of bodies have secretariats rotated among annually elected officers, making continuing contact somewhat problematic.
- Information on the creation, existence or formal dissolution of an organization in a given year may only be received some time later.

In such a dynamic environment, the time required for information collection may even be greater than the effective life of an organization.

Section 9: Table 1.1. Current year

Geographic distribution of international meetings in 2012

Please see the Introduction for information regarding the criteria for inclusion in this report, and the policy regarding geographical names.

Countries are listed alphabetically. Cities are listed alphabetically within country.

The data in this report are drawn from the *International Congress Calendar*, the meetings database of the UIA. In this table:

Meetings counted under the heading “A” are “Meetings of international organizations” and meet all the following criteria:

- meetings organized or sponsored by “international organizations”, i.e. international non-governmental organizations (INGOs) and intergovernmental organizations (IGOs) that are included in the UIA's *Yearbook of International Organizations* (see the Introduction “What is an ‘international organization’”) and whose details are subject to systematic collection and updates on an annual basis by the UIA
- with at least 50 participants, or number of participants unknown.

Meetings counted under the heading “B” are “Other international meetings (3 days)” and meet all the following criteria:

- meetings not organized or sponsored by “international organizations” but nonetheless of significant international character, notably those organized by national organizations and national branches of international organizations
- at least 40 percent of the participants are from countries other than the host country and at least 5 nationalities are represented
- lasting at least 3 days, or of unknown duration
- with either a concurrent exhibition or at least 300 participants

Meetings counted under the heading “C” are “Other international meetings (2 days)” and meet all the following criteria:

- meetings not organized or sponsored by “international organizations” but nonetheless of significant international character, notably those organized by national organizations and national branches of international organizations
- at least 40 percent of the participants are from countries other than the host country and at least 5 nationalities are represented
- lasting at least 2 days, or of unknown duration
- with either a concurrent exhibition or at least 250 participants

Caveat: It should be remembered that the number of meetings in the database for the current reporting year will, on average, increase by 25 percent over the following three years, and by 40 percent over the following five years.
